## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Beldham et al., US 5,059,954.

Regarding claim 1, Beldham et al. teach a liquid level detector wherein a nozzle (16) is arranged in a container (12) containing liquid (14), and air is discharged into the liquid from an opening of said nozzle and the back pressure in said nozzle is detected (“pressure switch 20 can sense the pressure in the probe”, col. 3, lines 16-18), thereby the liquid level is detected, and said liquid level detector being characterized by said opening of said nozzle (18) is arranged to be inclined with respect to the liquid level (Figure).

Regarding claim 2, Beldham et al. teach wherein said opening (18) of said nozzle (16) is opened in a direction inclined with respect to the axial direction of said nozzle (Figure).

3. Claims 1 and 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Brown et al., US 3,307,397.

Regarding claim 1, Brown et al. teach a liquid level detector wherein a nozzle (4) is arranged in a container (6) containing liquid (8), and air is discharged into the liquid from an

opening of said nozzle and the back pressure in said nozzle is detected, thereby the liquid level is detected (col. 1, lines 20-31), and said liquid level detector being characterized by said opening of said nozzle (4) is arranged to be inclined with respect to the liquid level (Fig. 1).

Regarding claim 3, Brown et al. teach wherein said opening of said nozzle (4) is opened in a direction generally perpendicular to the axial direction of said nozzle, and said nozzle is arranged with the axis thereof inclined with respect to said liquid level (Fig. 1).
